

Local Debris Management Planning

The image shows a residential street with several houses. The houses have light-colored siding, and some windows appear to be boarded up or broken. A large, dark tree branch is broken and lies across the foreground, partially obscuring the view of the houses. In the background, a person wearing a green shirt and a cap is standing near the houses. The sky is overcast and grey, suggesting a storm or a gloomy day.

Panel Discussion: Chesterfield, Richmond, Henrico, Hanover

Plan Creation & Management

- Who is the lead agency for the plan?
- Who facilitates the plan creation and updates?
- Who is involved in planning process?
- How often is it reviewed and updated?
- Do you train and exercise the plan?
- What have been the challenges of creating and maintaining a debris management plan?
- What considerations have you had to be mindful of when planning?

Plan Components

- Plan activation
- Operational coordination
- Debris management routes
- Debris management sites
- Permitting processes
- Debris hauling and debris monitoring
- Communications plan
- Others
